1. Background

Textymizer is a lightweight, offline document anonymization tool for PDF files. It helps you mask sensitive information — names, account numbers, dates, references, or any other text — before sharing a document with lawyers, accountants, colleagues, or AI tools, or before archiving it.

Unlike anonymization tools that rely on automated AI detection, Textymizer puts you in full control. You decide exactly which lines or text fragments are sensitive, and Textymizer creates a clean, anonymized copy of the document — your original file is never modified.

Privacy by design

All processing happens locally on your own computer.

No document is uploaded or transmitted anywhere.

Your files never leave your device.

2. Installation Requirements

Requirements

- Operating system: Windows 10 or later
- Works fully offline — no internet connection is required to run the app
- Standalone application — no separate installation of multiple runtimes is needed

Installing Textymizer

1. Download the installer from textymizer.com.
2. Run the .exe file.
3. On first launch, Textymizer automatically creates a shortcut on your Desktop for quick access.

Note: Windows may show a warning for newly downloaded applications (SmartScreen). If this appears, click “More info” and then “Run anyway” to continue with installation.

3. Interface Guide

Once launched, the Textymizer window is organized into five numbered sections, arranged top to bottom.

1. PDF file

- + Add PDF — opens a file picker to load the PDF you want to anonymize.
- Remove — clears the currently loaded file so you can load a different one.
- Analyze (blue button, top right) — reads the loaded PDF and extracts its text.

Textymizer processes one file at a time. To switch files, click Remove first, then Add PDF.

2. Lines

After you click Analyze, this panel lists every line of text Textymizer found in your PDF, each preceded by its line number — this is how you'll refer to specific lines in step 3 below.

- Right-click inside this panel for quick actions: Copy selected, Select all, or “Paste to 'Text to anonymize'” — the fastest way to send an exact line into the field below without retyping it.

3. Line numbers to anonymize

Type the numbers of the lines you want to hide, using commas for individual lines and hyphens for ranges, for example: 1, 3, 5-7, 10.

4. Text to anonymize

If you know the exact word or phrase you want to hide but not which line it's on, type it here — one phrase per line. Textymizer will search the whole document and anonymize every place that exact phrase appears, even if it occurs more than once.

- Right-click for Cut, Copy, Paste, Select all, and Undo.

5. Output folder

- Select folder — choose where the anonymized file(s) should be saved.
- Anonymize PDF (checkbox) — produces a redacted copy of your document.
- Export to Excel (checkbox) — additionally saves the anonymized data to a spreadsheet.
- Anonymize & save (green button, bottom right) — runs the anonymization using your selections above.

Status bar

At the very bottom of the window, a status message shows what Textymizer is currently doing (for example “Ready” or “Analyzing...”), while the right-hand side shows your remaining daily usage, e.g. “PDF 1/3/day Excel 120/500 chars/day”.

4. Using the Application

Step 1 — Add your PDF file

Click + **Add PDF** and select the PDF you want to anonymize from your computer.

Step 2 — Analyze the document

Click **Analyze**. Textymizer reads the text layer of your PDF and lists every line in the **Lines** panel, each with its own line number.

Step 3 — Choose what to anonymize

You can combine two approaches in the same run:

1. **By line number:** look through the Lines panel, note the line numbers containing sensitive text, and type them into “Line numbers to anonymize” (e.g. 1, 3, 5-7, 10). Tip: right-click a line and choose “Paste to Text to anonymize” to copy it exactly, without retyping.
2. **By exact text:** type the precise word or phrase into “Text to anonymize” (one per line) if you know what needs hiding but not which line it's on. Every occurrence of that exact phrase anywhere in the document will be anonymized.

If a typed phrase isn't found anywhere in the document, Textymizer will let you know and ask whether you'd like to continue anyway.

Step 4 — Choose your output options

1. Click Select folder and choose where the output should be saved.
2. Tick Anonymize PDF to produce a redacted image copy of the document.
3. Tick Export to Excel to additionally save the selected data to a spreadsheet.

You can select one option or both, depending on what you need.

Step 5 — Anonymize & save

Click **Anonymize & save**. Textymizer will:

- Cover each selected line or matched phrase with a solid block on every page where it appears.
- Add a small “textymizer.com” watermark in the corner of each page (Free version).
- Save the result to your chosen output folder (and export to Excel, if selected).

Important — this step is permanent

The program saves the anonymized PDF as flattened page images, which means the covered text cannot be restored afterwards, by Textymizer or any other program.

Your original PDF file is never changed or overwritten — if you need to redo the anonymization, simply start again from the original file.

5. Understanding Your Output Files

Anonymized PDF

Saved as one PNG image per page in your chosen output folder (for example, report_anonymized.png for a single page, or report_anonymized_p1.png, _p2.png, etc. for multiple pages).

Excel export

Saved as anonymized_data.xlsx. Each anonymized line or phrase becomes its own row, with columns for the source file name, the type (Line or Free text), the line number (where applicable), and one or more “Cell” columns.

- Numbers, dates, and currency amounts are automatically split into their own cells, separate from surrounding text, so they can be filtered or totaled independently in Excel.
- If anonymized_data.xlsx already exists in the output folder, new rows are appended to it rather than overwriting the file — useful for building a single combined spreadsheet across several documents over time.

6. Frequently Asked Questions

What is Textymizer?

A tool that lets you quickly hide sensitive text in a PDF so you can share or archive a safe copy — with you, not an automated AI system, deciding what counts as sensitive.

Does it change my original document?

No. Textymizer always creates a new, separate anonymized file. Your original PDF is left untouched.

Do I need any technical skills?

No. The five-section layout is designed to guide any user through the process step by step.

Can I anonymize only specific parts of a document?

Yes — by line number, by exact text phrase, or a combination of both.

Is my document uploaded anywhere?

No. All processing takes place locally on your computer; nothing is sent over the internet.

Does Textymizer support file types other than PDF?

The Free Version supports PDF files only. Editions supporting additional file types and higher processing volumes are planned.

What if I select the wrong line or text?

Since your original file is never modified, you can simply reopen it and run the anonymization again with different selections.

Can the anonymized content be recovered afterwards?

The anonymized PDF is saved as a flattened image, so the covered content cannot be restored once saved. Always review your selections carefully before clicking “Anonymize & save.”

7. Important Notes

1. Review before you save. Because the anonymized PDF cannot be reversed once created, carefully check the Lines panel and your typed phrases before clicking Anonymize & save.
2. Copy exact phrases instead of retyping them. The “Text to anonymize” search looks for an exact match, so use the right-click “Paste to 'Text to anonymize'” option from the Lines panel whenever you can, rather than typing a phrase by hand.
3. The Free version has its limits. If you have several documents to process, keep the 3-PDF and 500-character daily allowances in mind, or consider upgrading if you routinely exceed them.
4. Keep your own backups. Textymizer never overwrites your source PDF, but it's still good practice to keep your original files and their anonymized copies organized and backed up.
